

Quick start

From install to your first message, on one page.

Install and start

- 1 Drag Soma Agent into Applications, then open it (opening straight from the dmg leaves it unfindable later).
- 2 Pick your interface language. You can change it later, and it does not lock what language characters speak.
- 3 Under ⚙ Settings → License, enter your email for a 7-day trial, or paste a license key you bought.
- 4 Under ⚙ Settings → AI Model, paste an API key (or pick Ollama for a free local model) — then start talking.

Buy and activate

- 1 Choose Basic or Advanced under Plans on the website; add Podcast if you want two characters talking to each other.
- 2 Complete payment in the Paddle checkout. Use an email address you can actually receive mail at.
- 3 Your licence key is emailed to that address, usually within a few minutes.
- 4 Open Soma Agent → ⚙ Settings → Licence, paste the key and press Activate.

Stuck?

No Dock icon

Expected — the pet deliberately stays out of the Dock. The character on your desktop is the app.

Character stuck on "Loading..."

Usually an imported texture that is not RGBA PNG. Convert it and import again.

No sound

Check the Azure key and region under ⚙ Settings → Voice, and that system volume is not muted.
